INTERNAL DOORS

SEPARATE YOUR ROOMS WITH CLASSY DESIGNS

We supply a unique collection of internal doors guaranteed to satisfy any taste. Hollow Doors are light, and with budget-effective installation. Solid doors are of higher quality, and superior sound and heat insulation.

HOLLOW DOORS

Hollow doors are most commonly used internally in mid-priced new homes. Hollow core doors are lightweight and easy to move and install but provide minimal sound blocking quality and air insulation.

SEMI-SOLID DOORS

Semi-Solid doors are heavier and more expensive than hollow ones but provide better sound and air insulation.

SOLID DOORS

Solid doors are constructed with quality wood veneers, glued over a solid core of engineered wood. Solid doors are heavier with excellent sound and heat insulation.

CHALKBOARD DOOR

Enhance your home and office with our distinctive chalk doors, brand new addition to our catalogue. Elevate your decor and inspire creativity with our chalkboard doors. Order now and add a touch of uniqueness to your kids' room! These interactive doors will spark creativity and playfulness in your children's space.

Consider incorporating a chalkboard door into your office layout to optimize space usage.

FIRE DOORS

Fire-rated doors are legally required in commercial, civil, and residential buildings, including apartment blocks. These doors are specifically designed to slow the spread of fire, allowing areas to be sealed off to provide time for evacuation or fire containment. By preventing fire from reaching certain sections, fire-rated doors not only reduce damage but also save lives. Strategic installation of fire doors is essential for business owners and those in strata buildings to ensure occupant safety.

WARRANTY TERMS AND CONDITIONS

- The inherent natural variations in colour and texture of the timber should not be classified as defects. It is normal for timber, including raised panels, to experience slight shrinking and swelling due to seasonal humidity changes, which is considered a typical characteristic rather than a defect. Delta Doors Pty Ltd or its agents are not liable for circumstances beyond their control, such as variations in the moisture content of the atmosphere.
- The purchaser is responsible for handling the doors with care and ensuring they are stored or hung in a dry building, avoiding damp, moist, or freshly plastered areas.
- When fitting the door, applying hardware, cutting (the door should only be trimmed within the manufacturer's recommended limits), or making alterations, it is crucial to ensure that the structural strength of the door remains uncompromised. It is advised to avoid fitting locks or hardware to the stile and rail joints.
- Before hanging or applying the first coat of paint/stain or varnish finish, it is necessary to inspect the doors upon their arrival for any visible defects.
- Any defects found must be reported to Delta Doors Pty Ltd within 7 days of delivery.
- To prevent excessive moisture absorption, it is essential to apply two coats of oil-based paint, stain, or varnish to the entire door, including the top, sides, bottom edges, and cut-outs for locks, handles, or hinges, immediately after fitting and before hanging. It is important to note that turpentine, thinner, acrylic, or water-based coats are not appropriate for timber doors.
- It is important to strictly follow the instructions provided by the paint/stain or varnish manufacturer when applying finishes. Water-based paint should not be used on timber veneer doors, and under no circumstances should water-based paint or stain be used on timber doors.
- For entrance and exterior doors, it is advisable to use light reflective colours for the finish in order to minimise the risk of heat absorption, which can potentially lead to warping or shrinking. Please note that using DARK COLOURS will void the warranty. It is also important to ensure that both faces of the door have similar colours applied.
- Entrance doors should be installed in a weather-protected area, with the loose beading facing externally. To prevent deterioration, it is important to conduct regular inspections and maintenance.
- Delta Doors Pty Ltd or its agents cannot be held accountable for any additional charges related to hanging, painting, or other expenses that arise from the replacement of a defective product.
- Delta Doors Pty Ltd will not take responsibility for doors that become defective as a result of failure to follow these recommendations after the doors have left the control of Delta Doors Pty Ltd.
- Delta Doors Pty Ltd is not obligated to reimburse any purchaser for doors that have been repaired or replaced without obtaining prior written consent.
- According to Australian Standards AS 2688 (1984 – Timber Doors), a warp of up to 6mm is not classified as a defect. For doors with a height of 2040mm, warping less than 6mm is not considered faulty, while for doors with a height of 2340mm, warping less than 8mm is acceptable. It is important to note that the rights of purchasers under the Trade Practices Act or similar State and Territory Laws, which impose obligations on manufacturers and suppliers, are not excluded by the information provided here.

Visit our Website (WWW.DELTADOORS.COM.AU) and go to "Customise your door" page. In just five simple steps, you can preview how a new door would look on the entrance of your home using a photo.

CUSTOMISE YOUR DELTA DOOR
